QuestionAnswer What is the primary function of the thyroid gland in endocrinology? The primary function of the thyroid gland is to produce hormones like thyroxine (T4) and triiodothyronine (T3) that regulate metabolism, growth, and development. How is diabetes mellitus diagnosed through laboratory tests? Diabetes mellitus is diagnosed by elevated fasting blood glucose levels (?126

mg/dL), an HbA1c level of 6.5% or higher, or an oral glucose tolerance test showing a 2-hour plasma glucose ≥ 200 mg/dL. What are common clinical features of hyperparathyroidism? Features include hypercalcemia symptoms such as bone pain, kidney stones, abdominal pain, psychiatric disturbances, and increased parathyroid hormone levels. Which hormones are primarily involved in the hypothalamic-pituitary-adrenal (HPA) axis? The main hormones include corticotropin-releasing hormone (CRH) from the hypothalamus, adrenocorticotrophic hormone (ACTH) from the pituitary, and cortisol from the adrenal cortex. What is the significance of serum calcium and phosphate levels in endocrine disorders? Serum calcium and phosphate levels help diagnose conditions like hyperparathyroidism (high calcium, low phosphate) and hypoparathyroidism (low calcium, high phosphate). How does Addison's disease present clinically? Patients typically present with fatigue, hypotension, hyperpigmentation, weight loss, hyponatremia, hyperkalemia, and gastrointestinal symptoms. What is the role of insulin in glucose metabolism? Insulin facilitates cellular uptake of glucose, promotes glycogen synthesis in the liver and muscle, and inhibits gluconeogenesis, thereby lowering blood glucose levels. Which imaging modality is commonly used to evaluate adrenal tumors? Computed tomography (CT) scan is commonly used to assess adrenal tumors for size, location, and characteristics suggestive of benign or malignant lesions. What are the key differences between type 1 and type 2 diabetes mellitus? Type 1 diabetes is an autoimmune destruction of pancreatic beta cells leading to absolute insulin deficiency, often presenting in younger individuals. Type 2 involves insulin resistance and relative insulin deficiency, typically occurring in adults with risk factors like obesity.
