Resources are owned and operated by third-party providers and are shared among multiple clients.

Pros:

- Cost-effective
- High scalability
- Minimal maintenance

Cons:

- Less control over data security
- Potential compliance issues for sensitive data
- Private Cloud

Resources are used exclusively by a single organization, either hosted on-premises or by a third-party provider.

Pros:

- Greater control and security
- Customizable for specific needs

Cons:

- Higher costs
- Requires in-house expertise
- Hybrid Cloud

Combines public and private clouds, allowing data and applications to move between them as needed.

Pros:

- Flexibility
- Optimized costs and security

Cons:

- Complex management
- Integration challenges
