- Marking points: Full marks awarded for both correct responses; partial for only one.

Sample Question 2: Electron Arrangement

- Question: "Describe how electrons are arranged in a sodium atom."
- Mark scheme expectations:
 - 2 electrons in the first shell
 - 8 electrons in the second shell

- 1 electron in the outer shell
- Additional notes: A correct electron configuration (e.g., 2.8.1) earns full marks.

Sample Question 3: Bonding and Structure

- Question: "Explain why sodium chloride forms a crystalline structure."
- Mark scheme points:
 - Electrostatic attraction between Na^+ and Cl^- ions
 - Regular repeating lattice structure
 - Strong ionic bonds leading to high melting point
- Awarding marks: Full marks for detailed explanation; partial for mentioning just electrostatic attraction.

Marking of Calculations and Numerical Questions

Calculations are a prominent part of C1 questions. The mark scheme provides detailed guidance on how to award marks:

- Step-by-step marking: Each calculation step is evaluated individually.
- Significant figures: Proper use of significant figures is required.
- Unit consistency: Correct units must be used; otherwise, marks may be lost.
- Common pitfalls: Incorrect use of molar masses or rounding errors are highlighted, with guidance on partial credit.
