The user aligns the zero mark of the vernier scale with the main scale and reads the measurement by noting the aligned marks on both scales.

Numerical Problem Example

Q: A micrometer screw gauge has a least count of 0.01 mm. If the instrument reads 15.23 mm, and a correction of 0.02 mm is to be applied, what is the true measurement?

A: True measurement = 15.23 mm + 0.02 mm = 15.25 mm
