sciences, and business.

Sample Problem and Solution Breakdown (Hypothetical)

To illustrate how the answer key supports learning, consider a typical problem from Chapter 8:

Problem: A survey reports that 55% of a sample of 200 voters support a new policy. Construct a 95% confidence interval for the proportion of all voters who support the policy.

Solution Steps (as might be detailed in the answer key):

- Identify the sample proportion ($p?$):

$$p? = 0.55$$

- Calculate the standard error (SE):

$$SE = \sqrt{p?(1 - p?) / n} = \sqrt{0.55 \cdot 0.45 / 200} \approx 0.035$$

- Determine the z-value for 95% confidence:

$$z \approx 1.96$$

- Compute the margin of error (ME):

$$ME = z \cdot SE \approx 1.96 \cdot 0.035 \approx 0.0686$$

- Construct the confidence interval:

$$(p? - ME, p? + ME) = (0.55 - 0.0686, 0.55 + 0.0686) \approx (0.4814, 0.6186)$$

Interpretation:

We are 95% confident that between approximately 48.1% and 61.9% of all voters support the policy.
