Exercise

Suppose $(X_1, X_2, \dots, X_n)$ are independent and identically distributed random variables from a normal distribution $(N(\mu, \sigma^2))$, where (σ^2) is known. Derive the maximum likelihood estimator for (μ) .

Solution Outline

- Write down the likelihood function:
- $(L(\mu) = \prod_{i=1}^n \frac{1}{\sqrt{2\pi}\sigma} \exp\left(-\frac{(X_i - \mu)^2}{2\sigma^2}\right))$.
- Take the natural logarithm to obtain the log-likelihood:
- $(\ell(\mu) = -\frac{n}{2} \log(2\pi\sigma^2) - \frac{1}{2\sigma^2} \sum_{i=1}^n (X_i - \mu)^2)$.
- Differentiate $(\ell(\mu))$ with respect to (μ) :
- $(\frac{d}{d\mu} \ell(\mu) = \frac{1}{\sigma^2} \sum_{i=1}^n (X_i - \mu))$.
- Set the derivative equal to zero and solve:
- $(\sum_{i=1}^n (X_i - \mu) = 0 \Rightarrow \hat{\mu} = \frac{1}{n} \sum_{i=1}^n X_i)$.
- Conclude that the MLE for (μ) is the sample mean.

His textbooks and research papers are widely used in graduate-level courses and advanced research. The exercises provided in his texts or inspired by his work serve to deepen understanding, challenge problem-solving abilities, and prepare students for research or practical applications.

Core Topics Covered in Jun Shao?s Mathematical Statistics Exercises

Before diving into solutions, it?s essential to identify the key areas you will encounter. These foundational topics form the backbone of most exercises and solutions:

- Probability Limit Theorems
- Law of Large Numbers (LLN)
- Central Limit Theorem (CLT)
- Asymptotic distributions

- Estimation Theory
 - Consistency and asymptotic normality of estimators
 - Maximum likelihood estimation (MLE)
 - Method of moments
- Hypothesis Testing
 - Neyman-Pearson lemma
 - Likelihood ratio tests
 - Asymptotic tests
- Nonparametric and Semiparametric Methods
 - U-statistics
 - Rank-based tests
 - Kernel density estimation
- Asymptotic Efficiency and Minimax Theory
 - Asymptotic minimax bounds
 - Efficiency of estimators

Approach to Solving Jun Shao's Exercises

The solutions to exercises in Jun Shao's texts often involve a blend of theoretical derivation, asymptotic analysis, and probability inequalities. Here is a structured approach to tackling these problems:

Step 1: Carefully Read the Problem Statement

- Identify what is being asked: proof, derivation, computation, or conceptual explanation.
- Note the assumptions and conditions provided.

Step 2: Recall Relevant Theoretical Results

- Map the problem to known theorems or lemmas.
- For example, if the problem involves asymptotic normality, recall the CLT or Lyapunov's condition.

Step 3: Break Down the Problem into Subparts

- Simplify complex problems by dividing them into manageable parts.
- For example, to prove consistency, verify the conditions of a relevant theorem (e.g., the Law of Large Numbers).

Step 4: Engage in Step-by-Step Derivation

- Use algebraic manipulations, inequalities, and limit arguments.
- Be meticulous with assumptions about convergence (almost sure, in probability, in distribution).

Step 5: Verify Conditions and Justify Each Step

- Ensure all conditions (e.g., independence, identical distribution, boundedness) are satisfied.
- Justify the use of each theorem or inequality.

Step 6: Summarize the Result Clearly

- State the conclusion explicitly.
- Connect it back to the original question.

Illustrative Examples and Solutions

Let's explore some common exercise types inspired by Jun Shao's work, along with detailed solution strategies.

Example 1: Asymptotic Normality of the MLE

Problem: Suppose $(X_1, X_2, \dots, X_n)$ are i.i.d. random variables with a density $f(x; \theta)$, where θ is an unknown parameter. Show that under regularity conditions, the maximum

likelihood estimator $\hat{\theta}_n$ is asymptotically normal:

$$\sqrt{n}(\hat{\theta}_n - \theta_0) \xrightarrow{d} N(0, I(\theta_0)^{-1}),$$

]

where $I(\theta_0)$ is the Fisher information.

Solution Outline:

- Step 1: Recall the regularity conditions for MLE asymptotics (differentiability, identifiability, Fisher information positivity).
- Step 2: Recognize that the MLE solves the score equation:

$$\frac{1}{n} \sum_{i=1}^n \frac{\partial}{\partial \theta} \log f(X_i; \theta) = 0.$$

]

- Step 3: Use Taylor expansion of the score function around θ_0 :

]

$$0 = \frac{1}{n} \sum_{i=1}^n \frac{\partial}{\partial \theta} \log f(X_i; \hat{\theta}_n) \approx \frac{1}{n} \sum_{i=1}^n \frac{\partial}{\partial \theta} \log f(X_i; \theta_0) + \left(\hat{\theta}_n - \theta_0 \right) \frac{1}{n} \sum_{i=1}^n \frac{\partial^2}{\partial \theta^2} \log f(X_i; \tilde{\theta}),$$

]

where $\tilde{\theta}$ is between $\hat{\theta}_n$ and θ_0 .

- Step 4: Show that the score function converges in distribution to a normal distribution via the CLT, and the second derivative converges in probability to $-I(\theta_0)$.
- Step 5: Rearrange the terms to obtain the asymptotic distribution:

$$\sqrt{n}(\hat{\theta}_n - \theta_0) \xrightarrow{d} N(0, I(\theta_0)^{-1}).$$

Example 2: Consistency of the Sample Mean

Problem: Prove that the sample mean $(\bar{X}_n = \frac{1}{n} \sum_{i=1}^n X_i)$ is a consistent estimator for $(\mu = E[X_i])$.

Solution Strategy:

- Step 1: Verify conditions for the Law of Large Numbers:
 - Independence (assumed).
 - Finite expectation $(E[|X_i|])$
- Step 2: Apply the Strong Law of Large Numbers (SLLN):

$$\bar{X}_n \xrightarrow{\text{a.s.}} \mu.$$

- Step 3: Alternatively, use the Weak Law of Large Numbers for convergence in probability:

$$\bar{X}_n \xrightarrow{p} \mu.$$

- Step 4: Conclude that $(\bar{X}_n)$ is a consistent estimator of (μ) .

Advanced Topics and Their Exercise Solutions

Asymptotic Efficiency and Minimax Estimation

In Jun Shao's work, a key area involves establishing whether estimators are asymptotically efficient or minimax. The solutions often involve:

- Calculating the asymptotic variance.
- Showing that an estimator attains the Cramér-Rao lower bound.
- Using techniques such as Le Cam's theory or modulus of continuity.

U-Statistics and Their Properties

U-statistics are central in nonparametric inference. Solutions include:

- Deriving the asymptotic normality via Hoeffding's decomposition.
- Computing the variance.
- Demonstrating asymptotic unbiasedness.

Tips for Mastering Jun Shao's Exercises

- Understand the Theoretical Foundations: Familiarize yourself with core theorems in probability and statistics.
- Practice Derivations: Re-derive key results to gain intuition.
- Use Inequalities Effectively: Chebyshev, Markov, and Hoeffding inequalities frequently appear.
