- Purify the digested fragments to remove enzymes and unwanted fragments.

### 3. Ligation of Insert into Vector

- Mix digested insert and vector in the presence of DNA ligase.
- Incubate under optimal conditions to promote covalent bond formation.

## 4. Transformation into Host Cells

- Introduce the ligation mixture into competent bacterial cells via heat shock or electroporation.
- Plate cells on selective media containing antibiotics to isolate transformants.

## 5. Screening and Verification
