Sample Problem and Solution Explored

Problem Statement

Suppose you are given a set of 10 elements. How many different 3-element subsets can be formed such that no two elements are consecutive?

Step-by-Step Solution by Olympia Nicodemi

- **Identify the problem type:** Counting subsets with restrictions.
- **Restate the problem:** Find the number of 3-element subsets from 10 elements with no two selected elements adjacent.

- **Approach:** Use combinatorics with restrictions, often called "combinations with gaps."
- **Method:** Model the problem by placing "gaps" between selected elements to prevent adjacency.

Detailed Solution

- **Represent the original set:** Elements labeled 1 through 10.
- **Select 3 elements:** Denote selected elements as X and non-selected as O.
- **Constraints:** No two X's are adjacent, so at least one O between any two X's.
- **Transform the problem:** Think in terms of placing 3 X's in the sequence with gaps in between.

Using a Combinatorial Model

- To ensure no two X's are adjacent, we can think of placing 3 X's in the sequence with at least one O between them, except possibly at the ends.

- The total number of O's is 7 (since $10 - 3 = 7$). We need to distribute these O's around the X's with the restriction that no two X's are consecutive.

- The problem reduces to placing 3 X's into the sequence such that there is at least one O between each pair, except possibly at the ends.

Applying the "Stars and Bars" Technique

- Imagine the sequence as slots where X's can be placed, separated by at least one O.

- The number of ways to choose positions for X's with the restriction can be calculated as:

\[

$$\binom{10 - 3 + 1}{3} = \binom{8}{3} = 56$$

\]

- Alternatively, the standard combinatorial formula for choosing k non-adjacent elements from n

is:

$\lfloor$

$$\binom{n - k + 1}{k}$$

$\rfloor$

which in this case is:

$\lfloor$

$$\binom{10 - 3 + 1}{3} = \binom{8}{3} = 56$$

$\rfloor$

Final Answer

Olympia Nicodemi concludes that there are 56 different 3-element subsets of the 10-element set with no two elements adjacent.
