Practice of surgical pathology

Surgical pathology is a vital subspecialty within the field of pathology that focuses on the diagnosis and characterization of diseases through the examination of surgical specimens. It plays a crucial role in guiding treatment decisions, prognostication, and patient management. The practice of surgical pathology requires a combination of meticulous laboratory techniques, deep anatomical and pathological knowledge, and effective communication with clinical teams. As a cornerstone of diagnostic medicine, surgical pathology ensures accurate identification of diseases such as cancer, infectious conditions, and inflammatory processes, ultimately improving patient outcomes.

Understanding Surgical Pathology: Definition and Scope

Surgical pathology involves the gross and microscopic examination of tissues obtained during surgery, biopsy, or other medical procedures. Its scope encompasses a broad range of specimen types, including:

- Tumor resections (e.g., mastectomy, colectomy)
- Biopsies (e.g., needle core, excisional)
- Cytology specimens (e.g., fine-needle aspiration)
- Autopsy tissues

The primary goal is to provide a definitive diagnosis, assess tumor margins, identify specific subtypes, and stage the disease. Surgical pathology integrates clinical history, gross examination, histological analysis, immunohistochemistry, molecular testing, and, when necessary, ancillary studies to arrive at comprehensive diagnostic conclusions.

The Workflow of Surgical Pathology Practice

Understanding the workflow helps appreciate the complexity and precision involved in surgical pathology. The typical steps are:

1. Specimen Receipt and Accessioning

- Mount sections on glass slides for staining.

4. Microscopic Examination

- Stain slides with hematoxylin and eosin (H&E).
- Evaluate cellular morphology, tissue architecture, and pathology features.
- Identify malignant or benign processes, inflammatory activity, or other abnormalities.

5. Ancillary Studies and Special Tests

- Perform immunohistochemistry to characterize tumor markers.
- Use molecular diagnostics for genetic alterations.
- Conduct microbiological or special stains if infection or other conditions are suspected.

6. Diagnosis and Reporting
