- Define valuation areas that represent organizational units requiring valuation.
- Assign appropriate currencies, including group and legal currencies.

Step 3: Enable Actual Costing

- In the Material Ledger configuration, enable actual costing by selecting the relevant options.
- Decide on the valuation views (e.g., legal, group) to be maintained.

Step 4: Define Price Control

- Set the price control indicator (S for standard prices, V for moving average/actual prices).
- For actual costing, typically, the price control is set to ?V? to allow actual prices.

Step 5: Configure Costing Keys and Costing Variants

- Set up costing keys that determine how costs are calculated during actual costing runs.
- Define variants specifying the scope and parameters for actual costing runs.

Step 6: Assign Material Types and Account Determination

- Ensure that material types are linked to valuation and costing procedures.
- Maintain account determination to post variances and updates correctly.

Running Actual Costing in ECC

Once configured, organizations can execute actual costing runs to update material prices based on actual data.

Step 1: Collect Actual Cost Data

- Ensure all relevant transactions (goods receipts, production orders, overhead allocations) are posted accurately.
- Maintain cost component splits for detailed analysis.

Step 2: Execute the Actual Costing Run

- Use transaction CKMLCP (Actual Costing Run) to initiate the process.
- Select the relevant valuation areas, periods, and variants.
- Monitor the process through system logs and reports.

Step 3: Analyze Variances and Cost Components

- Review variance analysis reports generated post-run.
- Investigate significant variances for potential corrections or process improvements.
