Detailed Breakdown of Commonly Examined Questions and Model Answers

Physics: Sample Questions and Tips

- Describe the motion of an object undergoing uniformly accelerated motion. (4 marks)

Model Answer:

An object undergoing uniformly accelerated motion experiences a constant rate of change of velocity over time. Its velocity increases or decreases at a steady rate, and its displacement over equal time intervals follows a quadratic relationship. The equations of motion, such as $v = u + at$ and $s = ut + \frac{1}{2}at^2$, describe this behavior.

Tip: Use diagrams to illustrate velocity-time graphs, showing the slope representing acceleration.

- Explain the principle of conservation of energy in mechanical systems. (3 marks)

Model Answer:

The principle of conservation of energy states that energy cannot be created or destroyed but only transferred or transformed from one form to another. In mechanical systems, the total energy (kinetic plus potential) remains constant if no external forces like friction do work on the system.

Tip: Incorporate real-world examples, such as a pendulum, to demonstrate energy transformations.

Chemistry: Sample Questions and Tips

- Write the electronic configuration of chlorine (Cl). (2 marks)

Model Answer:

Chlorine has 17 electrons. Its electronic configuration is $(2p^6 3p^5)$.

Tip: Remember the order: 1s, 2s, 2p, 3s, 3p, etc., and use the atomic number for guidance.

- Balance the following chemical equation:

$(\text{Fe} + \text{O}_2 \rightarrow \text{Fe}_2\text{O}_3)$. (3 marks)

Model Answer:

Balanced equation:
